

Adwaits - Front End Development Intern - Assignment

Scenario

You are going to design a page with scroll behaviour in your assignment, We have always given priority to smooth interaction over static objects.

You have been asked to come up with a code script which will ensure a smooth user experience.

Assignment

In context of the above mentioned scenario, please complete the following tasks:

1. The first saffron background window will start to go up as you start scrolling, refer to the documentation attached for the clear understanding.
2. After the user finishes the first scroll he will see a static image in full window that will scale down on the laptop screen later. (Refer to the scroll behaviour video file)

Guidance

- **While executing this task please keep the points mentioned on the internship description in your mind**, your assignment will be assessed on them only.
- In order to research, please feel free to refer to any repository available on internet
- You can submit the assignment by packaging the codes in a Zip file.

Feel free to reply to this email/message in case you have any queries.
